M.S. Applied Data Intelligence, SJSU (May 2026) • Data Analytics • SQL • Python • A/B Testing • Tableau

INTRODUCTION

Data Analyst with an M.S. in Applied Data Intelligence (SJSU, May 2026) and 2 years of software engineering internship experience. Expert at writing optimized SQL queries, cleaning and preprocessing large datasets in Python/pandas, validating product changes with statistical hypothesis testing (A/B testing), and building interactive dashboards (Tableau, Streamlit) to guide operational and roadmap decisions. Deployed automated pipeline analytics and calculated marketplace conversion funnels to drive revenue decisions. Seeking full-time Data/Product Analyst roles.

EDUCATION

Master of Science in Applied Data Intelligence | San Jose State University May 2026
Coursework: Machine Learning, Generative AI & LLMs, Cloud Computing, Systems Integration, Advanced Data Analytics. Self-study: Designing ML Systems (Stanford), Building Production RAG Systems (DeepLearning.AI), LangGraph Academy.

Bachelor of Engineering in Computer Science | GITAM Institute of Technology May 2024
Coursework: System Design, Distributed Systems, Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Operating Systems.

DATA ANALYTICS PROJECTS

TaskFlow: Product Analytics Center SQL • Python • Pandas • Scipy.stats • PostgreSQL • Streamlit

- Analyzed event streams of 10,000 active users, 2,500 workspaces, and 472K behavior logs over a 24-month period using window functions and CTEs to build a cohort retention decay model.
- Discovered that the low-adoption Time Tracking feature drives a 3.9x 30-day retention lift; structured a roadmap prioritization matrix estimating a **+\$450K ARR** impact by shifting the feature to the main navigation.
- Evaluated a redesigned onboarding flow via a simulated A/B test (3,045 sample size); verified that the variant lifted onboarding completion rates by 9.3% absolute using a Chi-Square test ($p < 0.001$, 99.9% statistical confidence).

Hire Hangar: Marketplace Liquidity & Funnel Analytics SQL • Python • Pandas • Scipy.stats • SQLite

- Built a multi-stage funnel query in SQLite mapping candidate progression across a 5-stage recruiting funnel (18,000 application records, 1,200 job postings).
- Computed sourcing channel yield rates; proved that Referral pipelines convert at 12.17% (32x better yield than paid LinkedIn ads), recommending a 20% budget reallocation.
- Conducted an A/B test analysis of an automated resume screening system (6,000 candidates); verified it increased screen-to-interview conversion by +5.69% absolute ($p < 0.001$) while showing no statistically significant drop in interview-to-hire quality ($p = 0.5557$).

Corporate Finance: Budget Controlling Dashboard Tableau • Excel • Data Modeling

- Modeled and visualized multi-million dollar corporate expense actuals vs. budget targets across 14 कॉस्ट (cost) centers to highlight spending variance for finance leadership.
- Designed interactive drill-down variance indicators and Cost Center distribution charts in Tableau to track **\$12M** in budget allocations.
- Achieved **94.2% forecast accuracy** by building rolling 3-month forecast models utilizing historical expenditure regressions.

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Venhan Technologies (client: CHRIMS Inc.), Hyderabad, India Apr 2022 – Apr 2024

- Maintained database integrity and API response times flat as transaction records scaled past 100,000 monthly transactions by implementing keyset pagination, composite B-tree indexes, and Redis caching.
- Optimized large reporting queries, bringing multi-year settlement report generation time from minutes down to milliseconds by precomputing aggregations in PostgreSQL materialized views.
- Improved pipeline data quality and eliminated database write failures by designing strict Pydantic models at endpoint boundaries to filter and validate malformed track-hardware JSON payloads.
- Reduced failed production releases by 40% by building GitHub Actions workflows executing automated linting, Pytest, and Docker builds.
- Built Grafana analytics dashboards and Sentry alerts to monitor live application latency and database connection pool metrics, cutting detection time for database failures from hours to under 3 minutes.

TECHNICAL SKILLS

Languages: Python, SQL (PostgreSQL, SQLite, MySQL), TypeScript/JavaScript, Bash, Typst

Core Analytics & Stats: A/B Testing, Cohort Analysis, Funnel Conversions, Hypothesis Testing (Chi-Square, t-tests), Data Cleansing & Quality, Opportunity Scoring, Trend Analysis

BI & Visualization: Tableau Desktop, Power BI, Looker Studio, Streamlit, Excel (Pivot Tables, VLOOKUP)

Data Infrastructure: PostgreSQL, SQLite, dbt (ETL schemas), Apache Kafka, Prometheus, Grafana, Docker, Git/GitHub Actions

Certifications: AWS Cloud Foundations • Claude 101 (Anthropic) • AI Fluency (Anthropic) • B.E.L.L.A x Mule Run Hackathon Winner
